
future source using Pascal scripting instead of Lua

Posted by Guru Kathiresan - 2010/02/17 12:20

I'm wondering if you have considered using a Pascal scripting component instead of Lua for the View ? Long time ago Pascal Server Pages was using a modified Pascal interpreter from the JVCL project, may be you can consider using it in the future ? Source can be found at : <http://sourceforge.net/projects/npascal/files/>

Thanks for your reply. The advantage of having a Pascal scripting is 1) I do not want to learn yet another scripting language 2)Dont have to work with a Basic like language 3)Use my Pascal knowledge when coding the View as well 4)Ability to interface with Delphi VCL without much problem 5)JvInterpreter is also cross platform 6)Not to have additional DLLs supplied with the web 7)Delphi/Free Pascal do have a big community Even with these advantages, if you are going to say no to Pascal scripting, I'm atleast wondering if you can make Pascal scripting an option one other than Lua ? May be you can check how other delphi developers feel about having a pascal scripting as well. -Guru Kathiresan

I work with delphi a lot of time, when i start on DOR i think the same way (whould be better work with pascal language), but lua is incredible, fantastic. Better choice that you could do Henri. We developers often are not used to adapt and for this reason we have lost great opportunities to learn new things and interesting.
